Port Talbot

Client:	Envases UK Ltd
Location:	Port Talbot
Sector:	Metal Processing (Canning)
TM services:	Project Management M&E Dismantling / Rebuilding Machinery Relocation Machinery Installation Heavy Lifting

Scope of Project:

Installation of New Canning Line

Envases UK Ltd is a privately owned company that produces aluminium cans for use in the aerosol industry, with a turnover of over £20 million.

Trojan-Mek carried out all off-loading and complete installation of a new canning line for the manufacturer.

This incorporated all lifting and assembly of the production line from the Aluminium slug press, through the cleaning, printing and drying, to the Robotised packing area.

"We have been dealing with Trojan-Mek for over 4 years. In this time they have been involved with us in the installation of two new production lines, one removal and re-installation along with many other tasks.

We have found them to be reliable, efficient and extremely accommodating in difficult situations in all the work they have done for us. They have always adhered to the latest Health & Safety regulations providing excellent quality work, on time and within budget.

The staff are particularly courteous and helpful, with nothing being too much trouble.

We have no hesitation in recommending Trojan-Mek for machinery moving, installation and factory removals to any other company."

Neil Hopkins, Industrial Manager, Envases UK
